

VA 500/ 520

Flow sensors for
compressed air
and gases incl.
temperature
measurement

What are the advantages of our flow measuring technology?

1) Even under pressure, the flow sensor VA 500 is mounted by means of a standard 1/2" ball valve. During mounting and dismounting the safety ring avoids an uncontrolled ejection of the probe which may be caused by the operating pressure.

For the mounting into different pipe diameters VA 500 is available in the following probe lengths: 120, 160, 220, 300, 400 mm.

So the flow sensors are being mounted into existing pipelines with inner diameters of 1/2" upwards.

The exact positioning of the sensor in the middle of the pipe is granted by means of the engraved depth scale. The maximum mounting depth corresponds with the respective probe length. Example: VA 500 with probe length 220 mm has a maximum mounting depth of 220 mm.

2) If there is no suitable measuring site with a 1/2" ball valve present there are two simple possibilities to set up a measuring point:

A Weld on a 1/2" screw neck and screw on a 1/2" ball valve

B Mount spot drilling collar incl. ball valve (see accessories)

By means of the drilling jig it is possible to drill under pressure through the 1/2" ball valve into the existing pipeline. The drilling chips are collected in a filter. Then the probe can be mounted as described under point A.

3) Due to the large measuring range of the probe even extreme requirements to the consumption measurement (high volume flow in small pipe diameters) can be met. The measuring range is depending on the pipe diameter - see table on the right hand side.

A Screw neck

B Spot drilling collar

Drilling under pressure

VA 500 - Flow sensor for compressed air and gases

The new VA 500 for flow measurement of compressed air and gases, optionally with display for flow in m³/h and total flow in m³.

Contrary to the previously used bridge circuit the newly developed evaluation electronics records all measured values digitally. This leads to a better accuracy also in case of large measuring spans of 1:1000.

Special features:

- RS 485 interface, Modbus-RTU as a standard
- Incl. temperature measurement
- Integrated display for m³/h and m³
- Usable from 1/2" to DN 1000
- Easy installation under pressure
- 4...20 mA analogue output for m³/h resp. m³/min
- Pulse output for m³ or M-Bus (optionally)
- Inner diameter adjustable via keypad
- Consumption counter resettable
- Adjustable via keys at the display: Reference conditions, °C and mbar, 4...20 mA scaling, pulse weight

5 point precision calibration with ISO certificate	3200 0001
M12 – T plug for VA 500/520 to connect several sensors to a M-Bus network or Modbus network.	020000823

Technical data VA 500

Parameters:	m ³ /h, l/min (1000 mbar, 20°C) in case of compressed air resp. Nm ³ /h, NI/min (1013 mbar, 0°C) in case of gases
Units adjustable via keys at display:	m ³ /h, m ³ /min, l/min, l/s, ft ³ /min, cfm, m/s, kg/h, kg/min
Adjustable via keypad:	diameter for volume flow calculation, counter resettable
Meas. principle:	calorimetric measurement
Sensor:	Thermal mass flow sensor
Meas. medium:	air, gases
Gas types adjustable via external devices DS 400, DS 500, PI 500	air, nitrogen, argon, nitrous oxide, CO ₂ , oxygen
Meas. range:	see table measuring ranges page 80
Accuracy: (m.v.: of meas. value) (f.s.: of full scale)	± 1.5 % of m.v. ± 0.3 % of f.s. on request ± 1.0 % of m.v. ± 0.3 % of f.s.
Operating temp.:	-30...110 °C probe tube -30...80 °C housing
Operating pressure:	up to 50 bar
Digital output:	RS 485 interface, Modbus RTU, M-Bus (optionally)
Analogue output:	4...20 mA for m ³ /h resp. l/min; on request: scaling for cfm, m ³ /min, l/min, l/s, ft ³ /min, m/s
Pulse output:	1 pulse per m ³ resp. per liter galvanically separated
Power supply:	18...36 VDC, 5 W
Burden:	< 500 Ω
Housing:	polycarbonate (IP 65)
Probe tube:	stainless steel, 1.4301 mounting length 220 mm, Ø 10 mm
Mounting thread:	G 1/2"

VA 520

The affordable flow meter for compressed air and gases incl. temperature measurement

Intelligent solutions for accurate flow measurement for compressed air and gases

The new affordable flow sensors VA 520 work according to the approved calorimetric measuring principle. An additional pressure and temperature compensation is not necessary. Contrary to the

previously used bridge circuit the newly developed evaluation electronics records all measured values digitally. This enables very precise and fast measurements. Due to the new evaluation electronics all VA 520 have an integrated Modbus output as a standard. So all parameters can be transferred via Modbus.

Due to its compact design it is possible to monitor all compressed air systems from the compressor to the smallest compressed air tool (1/4" to 3 inch) with the

new affordable flow sensor VA 520. VA 500 flow sensors are available for larger pipe diameters from DN 50 to DN 1000. Apart from compressed air also other gases like e.g. nitrogen, oxygen and CO2 can be measured.

Removal of the measuring device without complete dismantling of the measuring section

In most cases the compressed air is not free from oil, condensate, dirt and particles. In the course of time this leads to a soiling of the flow meters which may cause errors

in measurement or even a total breakdown. The flow sensors which have been on the market up to now generally cannot be cleaned and will be exchanged if they are

soiled. In case of compressed air meters with integrated measuring section the „measuring device“ cannot be removed. For this reason an expensive bypass line is necessary. The design of **VA 520** enables the removal and cleaning of the „measuring device“ with e.g. soap water without any dismantling of the measuring section. A closing cap grants a continuous use of the line for the duration of the cleaning. A bypass line is not necessary. The alignment pin grants an accurate installation of the measuring device.

2. Stationary use

For stationary use there are the following outputs available for the data transfer to a building management system or PLC:
4...20 mA for actual flow.
Pulse output (galvanically separated) for the total consumption.

3. Mobile use

By means of quick couplings the flow sensor can be integrated quickly into the feed hose of a machine. During the shutdown of the machine it is possible to determine the leak rate, the actual flow can be obtained when the machine is running. The power supply is effected via the power socket by means of the mains unit. For data recording over a longer period of time we recommend to use the compressed air analyzer DS 400 mobile.

4. Solution for large pipe diameters

The approved flow sensor VA 500 is available for pipe diameters of 2" to DN 1000. Its constructively sophisticated design enables the installation into pipes with nominal diameters up to DN 1000 even under pressure. The installation is effected by means of standard 1/2" ball valve.

VA 520 - The advantages at a glance

NEW: Modbus-RTU output

- 4...20 mA output for actual flow
- Pulse output for total flow (counter reading), galvanically isolated or M-Bus (optionally)

Measuring device removable:
Dismounting of the whole measuring section is not necessary, no bypass required

Display twist able by 180°C
e.g. in case of reverse flow direction

Display shows 2 values at **the same time**:

- Actual flow in m³/h, l/min,...
- Total consumption (counter reading) in m³, l
- resp. temperature measurement

Values indicated in the display turnable by 180°C, e.g. in case of overhead installation

At the touch of a button:

- Reset of counter reading
- selection of units
- zero-point adjustment, leak flow volume suppression

Screw-in thread:

Easy installation into the existing pipeline due to integrated measuring section (suitable for 1/4", 1/2", 3/4", 1", 1 1/4", 1 1/2" or 2" lines)

High measuring accuracy due to defined measuring section (inlet and outlet section)

Application-technological features of the flow sensors VA 520:

- The integrated Modbus interface enables the connection to superordinate control systems like energy management systems, building management systems, SPS, SCADA,
- Easy and affordable installation
- Units freely selectable via keys at the display m³/h, m³/min, l/min, l/s, kg/h, kg/min, kg/s, cfm
- Compressed air counter up to 1.999.999.999 m³. Reset able to „zero“ via keypad
- Analogue output 4...20 mA, pulse output (galvanically separated)
- High measuring accuracy also in the lower measuring range (ideal for leakage measurement)
- Negligibly small loss of pressure
- Calorimetric measuring principle, no additional pressure and temperature measurement necessary, no mechanically moved parts
- Comprehensive diagnosis functions can be read out at the display or by remote access via Modbus-RTU like e. g. exceeding Max./Min values °C, calibration cycle, error codes, serial number. All parameters can be read out and changed via Modbus

Application range of VA 520:

- Compressed air balancing, compressed air consumption measurement
- Leakage air/leak rate determination
- Mobile compressed air measurement in front of single machines / plants
- Flow measurement of process gases like e.g. nitrogen, CO2, oxygen, argon, nitrous oxide
- Flow measurement at nitrogen generators
