Application BR02

Batch/Ratio **Process Controller**

for Volumetric Analog Flowmeters

Features

- Tailored for volumetric analog input such as vortex flowmeters
- Single or Dual stage control
- Preset or manual On-Off modes
- Easy access to batch and flow rate presets
- No-flow, leakage and overflow error detection
- Remote RUN/STOP/RESET functions
- Allows for permissive with prompt
- Uses PI Loop Control
- Allows for non-linear correction of flow input
- Storage of 1000 transactions with time and date stamp
- Selection of Detail or Basic main menu to suit operator and application
- Available protocols on communication ports including

Overview

The 515 BR02 application is a batching flow controller for delivery of preset quantities at preset flowrates using a volumetric analog input. Batch control can operate in preset or on-off modes, while flow control can be set to local (manual) or PI loop mode.

This application provides the operator with clear local readout including flowrate deviation and can be controlled via communications in more automated systems. There is quick access to commonly used preset values directly from the front panel if access has been authorized.

The PI control of the process flow is via a 4-20mA proportional valve or pump controller. It has integral windup protection, a deadband, output hold and ramp time that can be programmed to reduce wear on valves and actuators and provide for bumpless operation.

Calculations

There are three types of control modes in which the process flow is dependent on the main flow. These are RATIO, BLEND-1 and BLEND-2 modes where the relationship between the flows are as follows:

Ratio Control Mode.

The process flow is a ratio of the main flow (0 to 400% range).

$$Ratio\% = \frac{P_{flow}}{M_{flow}} \times 100$$

Blend Control Modes.

These modes cater for blending points before and after the main flowmeter. The process flow is a ratio of the net (combined) flow (0 to 80% range).

$$Ratio\% = \frac{P_{flow}}{Net_{flow}} \times 100$$

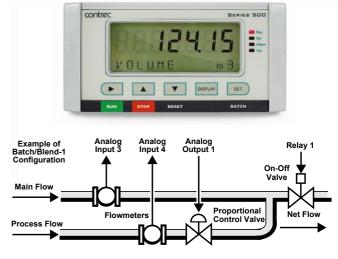

Displayed Information

The front panel display shows the current values of the input variables and the results of the calculations. A list of the variables for this application and their type (total or rate) is shown at the end of this document.

The instrument can be supplied with a real-time clock for storage of up to 1000 transactions with time and date stamps.

Communications

There are two communication ports available as follows:

- COM-1 RS-232 port
- COM-2 RS-485 port (optional) or Ethernet (optional)

The ports are available for remote data reading, printouts and for initial application loading of the instrument.

Isolated Outputs

The opto-isolated outputs can be configured to retransmit any main menu variable or provide various error/control signals (flow error, pump control, end-of-batch, etc.). One output is standard, a second output is available as an option.

Relay Outputs

The relay outputs 1 and 2 are used to control the flow of product for each delivery. These contacts are normally open and can be used to drive external relays, valves, pump circuits etc. The advanced option provides another two relays that can be used as fully programmable alarms for any rate type variable.

Software Configuration

The instrument can be programmed to suit the particular application needs and the flexible I/O can be assigned as required. Program settings can be changed either via the front panel (depending on assigned access levels) or via the 500 Series Program Manager (500-PM software).

The instrument stores all set-up parameters, totals and logged data in non-volatile memory with at least 30 years retention.

Data Stored Setup, Totals and Logs

Approvals

Electrical & Interference UKCA, CE, CSA compliance

Ex d Enclosure - ATEX & IECEx available for **Enclosure**

hazardous area (CSA Pending).

Field Mount Enclosure - UKCĂ, CE, CSA safe

area weather proof enclosure. Other - RoHS compliant

Real Time Clock (Optional)

Battery Type 3 volts Lithium button cell

For Issue 7 option card, type CR2450N

manufactured by Renata only
- For conformal coated 'C' version, type BR2032

manufactured by Panasonic only - For non-conformal coated versions, type

BR2032 and CR2032 manufactured by Panasonic or Sony

Battery Life 5 years (typical)

Analog Input (General)

Overcurrent 100mA absolute maximum rating

(30mA for 4-20mA inputs)

Update Time < 1.0 sec

Configuration 4-20mA, 0-5V and 1-5V input

Non-linearity Up to 20 correction points (some inputs)

4-20mA Input

Impedance 100 Ohms (to common signal ground)

0.05% full scale (20°C) **Accuracy**

0.1% (full temperature range, typical)

0-5 or 1-5 Volts Input

Impedance 10MOhms (to common signal ground)

0.05% full scale (20°C) **Accuracy**

0.1% (full temperature range, typical)

Logic Inputs

Signal Type CMOS, TTL, open collector, reed switch

Overvoltage 30V maximum

Relay Output

No. of Outputs 2 relays plus 2 optional relays

250 volts AC. 30 volts DC maximum Voltage

(solid state relays use AC only)

3A maximum - mechanical relays Current 1.5A maximum - solid state relays

Communication Ports

Ports

COM-1 RS-232 port COM-2 RS-485 or Ethernet port (optional)

Baud Rate 2400 to 19200 baud Odd, even or none **Parity**

Stop Bits 1 or 2 **Data Bits**

Protocols ASCII, Modbus RTU, Modbus TCP/IP (Ethernet

Port), Printer

Transducer Supply

Voltage 8 to 24 volts DC, programmable

Current 70mA @ 24V, 120mA @ 12V maximum

Protection Power limited output

Isolated Output

No. of Outputs 2 configurable outputs

Pulse/Digital or 4-20mA output Configuration

Pulse/Digital Output

Signal Type Open collector

Switching 200 mA, 30 volts DC maximum

Saturation 0.8 volts maximum

Pulse Width Programmable: 10, 20, 50, 100, 200 or 500ms

4-20 mA Output

9 to 30 volts DC external Supply

Resolution 0.05% full scale

0.05% full scale (20°C) **Accuracy**

0.1% (full temperature range, typical)
